

A diagram illustrating the decomposition of a vector into two components. A horizontal vector is shown at the top, with a vertical line segment extending downwards from its midpoint. This vertical line segment is divided into two parts by a horizontal line. The upper part is labeled $\frac{1}{2}a$ and the lower part is labeled $\frac{1}{2}b$. The total length of the vertical segment is indicated by a bracket on the right, labeled $\frac{1}{2}(a+b)$.
